Probable lectin 2 precursor - alfalfa
C:Species: Medicago sativa (alfalfa)
C:Species: To-10-1099 #sequence_revision 16-Jul-1999 #text_change 20-Jun-2000
C:Species: To-10-109620
R:Brill, L.M.: Pieternel, V.R.
Submitted to the EMBL Data Library, March 1998
A:Description: Legume seed lectin genes: sequence of Mslec2 from Alfalfa, Alfalfa and A:Reference number: 216780
A:Reference number: 216780
A:Reference number: 216780
A:Status: Preliminary; translated from GB/EMBL/DDBJ
A:Residues: 1-279 <ARIA
A:Residues: 1-279 <ARIA
A:Residues: 1-279
C:Superfamily: plant lectin
C:Reywords: calclum; glycoprotein; lectin
C:Reywords: calclum; glycoprotein; lectin
C:Reywords: calclum; glycoprotein; lectin
F:1-25/Domain: signal sequence #status predicted <AMT>
F:26-279/Product: probable lectin 2 #status predicted <AMT>
A; Molecule type: protein
A; Residues: 1-3, 'K', 5-23, 'A', 25-29, 'K', 31-35 <BIO>
A; Experimental source: seed
C; Superfamily: plant lectin
C; Keywords: calcium binding; glycoprotein; homotetramer; lectin; manganese; seed
F; 116-129, Domain: glycopeptide #status predicted <GLP>
F; 113, 117, Plinding site: carbohydrate (Asn) (covalent) #status predicted
F; 127, 129, 140, 145, Plinding site: manganese (Glu, Asp, Asp, His) #status predicted
F; 129, 140/Binding site: calcium (Asp) #status predicted

-i - FUNCTION: BARK LECTINS ARE STORAGE PROTEIN THAT PROBABLY MAINTAINS STOCKS OF NITROGEN DURING DORMANT PERIOD. SELF-AGGREGATABLE MOLECULES THAT CAN BIND THEIR OWN CARBOHYDRATE SIDE CHAINS. THEY COULD ALSO PLAY A ROLE IN THE PLANT'S DEFENSE AGAINST PHYTOPHAGOUS INVERTEBRATES OR HERBIYOROUS HIGHER ANIMALS.
-i - SUBBNIT: REBAI IS COMPOSED OF TWO POLYPEPTIDES.
-i - SUBBNIT: REBAI TO PIVE DIFFERENT TETRAMERIC ISOLECTINS. THE A4

UGENO M., Ogawa H., Matsumoto I., Seno N.;
I. Manovel mannose-specific and sugar specifically aggregatable lectin from bark of the Japanese pagoda tree (sophora japonica).";
J. Biol. Chem. 266:3146-3153(1991).
I. FUNCTION: MANNOSE/GLUCOSE-BINDING BARK LECTIN. DISPLAYS
HEMAGGLUTINATING ACTIVITY AT PH 5-10, WITH A PH OPTIMUM AT 8-9.
I. FUNCTION: BARK LECTINS ARE STORAGE PROTEIN THAT PROBABLY MAINTAINS
STOCKS OF NITROGEN DURING DORMANT PERIOD. SELF-AGGREGATABLE
MOLECULES THAT CAN BIND THEIR OWN CARBOHYDRATE SIDE CHAINS. THEY
COULD ALSO PLAY A ROLE IN THE PLANT'S DEFENCE AGAINST PHYTOPHAGOUS
INVERTEBRATES OR HERBIYORUS HIGHER ANIMALS.
I. SUBUNIT: COMPOSED OF FOUR SUBUNITS OF ABOUT 30 KDA WHICH ARE POST-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-MAY-1997 (TrEMBLrel. 03, Last sequence update)

"A novel mannose-specific and sugar specifically aggregatable lectin from bark of the Japanese pagoda tree (sophora japonica).";

J. Biol. Chem. 266.3146-3153(1991).

-!- FUNCTION: MANNOSE/GLUCOSE-BINDING BARK LECTIN. DISPLAYS
HEMAGGLUTINATING ACTIVITY. THIS ACTIVITY IS LOST AT PH BELOW 6.

-!- FUNCTION: BARK LECTINS ARE STORAGE PROTEIN THAT PROBABLY MAINTAINS STOCKS OF NITROGEN DORNAY PERIOD. SELE-AGGREGATABLE MOLECULES THAT CAN BIND THEIR OWN CARBOHYDRATE SIDE CHAINS. THEY COULD ALSO PLAY A ROLE IN THE PLAMY'S DEFENCE AGAINST PHYTOPHAGOUS INVERTEBRATES OR HERBIVOROUS HIGHER ANIMALS.

-!- SUBUNIT: COMPOSED OF FOUR SUBUNITS OF BOUT 30 KDA WHICH ARE POSTTERNSLATIONALLY CLEAVED INTO A TWO SMALLER POLYPEPTIDES: AI AND
                                                                                                                                                                                                                                                         Sophora japonica (Japanese pagoda tree).

                                                                                             The present sequence is a partial a FRIL (FIK2/FIL3 tyrosine kinase receptor-interacting lectin) protein. The specification describes a composition of one or more members of FRIL family of progenitor cell preservation factors. The composition is useful for alleviating or reducing the hematopoietic progenitor cell-depleting activity of a therapeutic treatment, including radiotherapeutic and/or chemotherapeutic reatments. Administration of FRIL compositions to a patient prior to treatment of the patient with a therapeutic treatment having a hematopoietic progenitor cell-depleting activity alleviates or reduces the hematopoietic progenitor cell-depleting activity alleviates or reduces the hematopoietic progenitor cell-depleting activity of the therapeutic treatment in the patient. FRIL family members are useful for isolating population of progenitor cells, hemangioblasts, and mesenchymmal
                                                                                                                                                                                                                                                                                                                                                              depleting effects of chemotherapeutics, so that the patient can receive a higher dose of the chemotherapeutics, so that the patient can receive a higher dose of the chemotherapeutic and preferably recover from cancer. It is also administered to patients having, or predisposed to developing a condition where the patients hematopoietic progenitor cells are depleted, such as severe combined immunodeficiency or aplastic anemia. The isolated mesenchymal cells are useful for tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 haematopoietic cell; cultured cell preservation; anticancer therapy; myeloablative therapy; sickle-cell anaemia; ablative therapy protection; FLK2/FLT3 receptor.
